¹I am happy to acknowledge how awesome Quarto is!

Introduction

I did a Thing

Stat 850

Beamer is a wonderful \LaTeX document class to produce PDF slide presentations

This theme was developed for the University of Nebraska–Lincoln.

The theme itself was developed from the PaloAlto, sidebar and sidbartab themes available by default in beamer.

However, this theme has several unique features and customizations:

- The color theme uses UNL's "scarlet and creme" colors.
- Improved spacing.
- Math mode preserves \LaTeX 's serif font.
- Incorporates UNL's Logo automatically.
- Unique drop shadows on the top and side bars!

For convenience, if you are in handout mode, all features, including the navigation symbols at the bottom right are shut off!

Beamer boxes are by default rounded. All beamer boxes (definition, theorem, etc) have the same color scheme.

Definition

This is my definition

$$A = \{p \mid p \text{ is prime} \}$$

Theorem

The set A is countable.

Using the Theme

I did a Thing

Stat 850

To use the UNL Theme, add

```
theme: UNLTheme
```

to your YAML metadata

To pass options to the package, use

```
themeoptions:  
  - left  
  - hideothersubsections
```

There are also several options that you can pass:

- `hideothersubsections` – This hides subsections in the sidebar *other than* the subsections of the current section.
- `hideallsubsections` – This option doesn't print *any* subsections in the sidebar.
- `width` – sets the width of the sidebar, default is `"2.5\baselineskip"`
- `height` – sets the height of the header, default is `"2.5\baselineskip"`
- `left` – sets the sidebar to the left of the slide (default).
- `right` – sets the sidebar to the right of the slide.

How to Get The Theme

I did a Thing

Stat 850

The theme is available in the UNL Statistics Templates repository.

You need You need `beamerthemeUNLTheme.sty` and `UNL.pdf` (the UNL logo).

Place them in the working directory or add them to `beamer/themes/theme` or somewhere in your \LaTeX path and you're good to go!
